**Contribution Journal: Lab 08 Project**

**Student Name:** Katherine Delores

**Project:** L8-Reflection-ML-1371-14274-2

**Date:** October 13, 2026

**Introduction**

This contribution journal serves to document the specific roles and responsibilities of each team member for our recent lab project. The project was a collaborative effort that required a comprehensive workflow, from initial coding and analysis to final documentation. The successful completion of the lab was dependent on the distinct contributions of Marisabel Morales, Joshua Balderas, and myself. This document outlines our individual efforts in our own words to provide a clear and transparent record of our work.

**Joshua Balderas: Code Development and Implementation**

Joshua was the primary architect of our project's technical foundation. His contribution was centered on the creation and execution of the Python code within the Jupyter Notebook. He was responsible for writing the scripts that performed the core data processing and analysis for the lab. This involved importing the necessary libraries, loading the dataset, and implementing the specific algorithms required to answer the lab's questions. Joshua’s work was meticulous; he ensured that the code was not only functional but also well-commented for clarity. His efforts were critical in generating the tangible results and outputs that formed the basis of our analysis, and he successfully exported the completed notebook as a PDF, ensuring all outputs were visible as required.

**Marisabel Morales: Analysis and Reflective Journal**

Marisabel was responsible for the critical analysis and interpretation of the results generated by Joshua's code. Her primary contribution was authoring the Reflective Journal, a key deliverable for the lab. In her journal, she demonstrated a strong grasp of the different learning types and the complexities of our project's workflow. She thoughtfully explained how our approach fit into the broader context of the lab's objectives, connecting the technical steps to the theoretical concepts. Her work was instrumental in synthesizing the raw outputs into a coherent narrative, showcasing our team’s understanding of the project’s significance and the challenges we overcame during its execution.

**Katherine Delores (Myself): Project Coordination and Contribution Journal**

My role in the project was twofold, focusing on project coordination and documentation. I was responsible for managing the workflow and ensuring our team met all the deadlines for the various deliverables. I facilitated communication between Joshua and Marisabel, ensuring that the code was delivered in a timely manner for Marisabel to analyze and that all questions regarding the lab requirements were addressed. Furthermore, my primary written contribution was the creation of this Contribution Journal. This document serves as a comprehensive record of our team's individual efforts, ensuring accountability and providing a clear breakdown of the work distribution as required by the lab guidelines.

**Conclusion**

In conclusion, the successful completion of this lab was a result of the combined and coordinated efforts of our team. Joshua provided the essential technical execution, Marisabel delivered the crucial analytical interpretation, and I oversaw the project's organization and documentation. By dividing the work according to our strengths and the specific deliverables, we were able to produce a complete and high-quality project that met all the specified requirements. This collaborative process highlighted the importance of clear communication and defined roles in achieving a common goal.
